Project Summary

SiteSpy is a mobile-focused project tool built with Expo React Native and Firebase. It supports construction project records, measurement review, estimate summaries, and clear project reporting.

Contribution Summary

My contribution focused on reviewing report-ready cost summaries, BOQ-style presentation, and the way project totals are communicated clearly.

Challenge and Solution

The main challenge was keeping technical estimate information readable. The solution was to present totals, categories, and project context in a compact reporting layout.

Learning Reflection

I strengthened my understanding of structured project reporting, GitHub Pages deployment, and the link between user-facing summaries and project records.

Presentation Notes

- Explain what SiteSpy does for a user. - Describe the assigned project area. - Connect the public portfolio to the GitHub repository. - Discuss GitHub Pages deployment and team collaboration. - Refer to real screenshots only after they have been captured from the student's own repository or project work.
